PROJECTS

AI Revenue Recovery Engine

Built an autonomous billing recovery platform using Next.js, TypeScript, Supabase, and a local Ollama LLM to diagnose payment failures and calculate revenue risk.

Quantum-Classical Financial Fraud Detection

Developed a hybrid quantum-classical fraud detection system using PyTorch and PennyLane by integrating a neural network with a 6-qubit variational quantum circuit.

EDUCATION

B.Tech - GITAM University (2023-2027) | CGPA: 9.22

12th - FIITJEE (2022-2023) | 83%

10th - SGS (2020-2021) | 75%

INTERNSHIPS

Research Intern | NIT Calicut | May 2026 - July 2026

Researched crosstalk mitigation in quantum computers using Qiskit and QDisLib. Evaluated KaHyPar, METIS and Branch-and-Bound partitioning algorithms under realistic quantum noise models

PUBLICATIONS

“Impact Of Quantum Computing on RSA Cryptographic Security”

International Conference at ANITS | July 2026

Comparative study of RSA, Shor's algorithm, GNFS and quantum noise simulations highlighting practical limitations of current quantum hardware.

SKILLS

Languages	Java	Python	JavaScript	C	
Technologies	React	Node.js	FastAPI	HTML	CSS
Databases	PostgreSQL	MongoDB	Supabase		
Tools	Git	GitHub	Vercel	Qiskit	

CERTIFICATIONS

Meta Front-End • Meta Back-End • Google AI Essentials

Google Prompting Essentials • AI For Everyone • IBM AI • Anthropic MCP Advanced

PARTICIPATIONS

- Google TechSprint 2025 – Semi-Finalist
- SIH 2025 - Participant
- TMCG Idea Sprint 3.0 2025 - Participant
